PARTNER BRIEF

Take cloud detection & response to the next level

Managed protection for your cloud environment

Cloud environments generate more alerts than most security teams can realistically triage. Visibility gaps are real, and the threats exploiting them don't wait while your team figures out where to focus.

Most organizations have invested in Wiz for good reason—it sees a lot. But seeing isn't the same as responding. Pairing Expel MDR with Wiz turns observation into action. Expel's SOC ingests and investigates Wiz findings 24×7—telling you what's real, what's noise, and what needs an immediate response. No rip-and-replace. No new platform to learn. Just your Wiz investment doing more.

Expel MDR & Wiz: better together

Expel, a recognized leader in the Forrester Wave™: Managed Detection And Response, Q2 2025, covers the full Wiz stack. That means Wiz Cloud—your CSPM layer for posture findings and misconfigurations—and Wiz Defend, Wiz's runtime CDR product for real-time threats in cloud workloads and the control plane. When something fires in either, Expel's SOC is already on it.

When Expel works an alert, that work flows back into Wiz automatically. Alert statuses sync from Expel Workbench into your Wiz console—open, investigating, closed—with SOC notes as a paper trail. Your team stops reconciling the same events across two platforms.

Expel MDR delivers 24×7 detection and response across cloud and Kubernetes environments, SaaS, identity, endpoints, networks, and SIEM. AI-powered automation handles the volume so expert analysts can focus on what actually requires human judgment.

WHAT YOU GET FROM AN EXPEL AND WIZ PARTNERSHIP:

Coverage your team can't sustain alone
Around-the-clock cloud monitoring from analysts who've worked in these environments before. No nights-and-weekends triage. No coverage gaps when someone's out.

Works with what you've built
No rip-and-replace. Expel integrates with your existing stack—including Wiz—so you're extending coverage, not rebuilding it.

Cloud threat expertise, applied
Expel's SOC knows how cloud attacks unfold. Combined with Wiz's platform telemetry, you get clear answers on what's actually critical—not just a longer alert queue.

A tighter Wiz investment
Direct feedback from Expel on detections, coverage gaps, and Wiz Defend workflows means your deployment keeps improving over time.

Transparency into everything
Full visibility into what Expel sees and does. Your team stays as hands-on or hands-off as makes sense for how you operate.

Expel MDR at a glance

Fast onboarding, immediate value

- Onboard in hours, not weeks. No lengthy deployment cycles before you see results. Connect Wiz, get coverage.

Response times that matter

- 17-minute mean-time-to-remediate for high/critical alerts with auto-remediation. Faster across the board, no matter the metric.

Scales with your environment

- Coverage that grows as your cloud footprint does. Share the SOC burden and keep your team focused on work that actually requires their expertise.

Predictable cost, specialized depth

- Fixed pricing. No surprise headcount. Security expertise without the overhead of building it internally.

What our customers say

"This partnership between Expel and Wiz helps alleviate the burden of sifting through alerts for my team, allowing us to identify threats more efficiently so we can get back to more pressing business priorities."

Jason Waits
CISO, Inductive Automation

"I really want to rely on this awesome combination of visibility, telemetry, and detection engineering to make sure that I've covered the basics so that I can hire great people to focus on the really interesting problems."

Aaron Stanley
VP of Security, dbt Labs

Ready to put your Wiz investment to work?

You've already got visibility. Expel turns it into response.
